**Amendments to the Specification:**

Please replace the paragraph beginning at line 27 on page 14 with the following amended paragraph:

As shown in FIG. 3A, the upper bearing 140 is press-fitted onto the shaft 130 downwardly, thereby forming a first assembly 100a. At this time, the inner diameter of the inner race 141 of the upper bearing 140 is ~~larger~~ smaller than the outer diameter of the shaft 130 so that the inner race 141 of the upper bearing 140 closely contacts with the outer circumference of the shaft 130, while maintaining the upper bearing 140 and the shaft 130 engaged with each other. The inner race 141 of the upper bearing 140 functions as a preloading boss in the existing bearing preloading construction.
